Internet Information Services (IIS) Installation

Windows 7 (Professional & Ultimate Editions)
Windows Vista (Business & Ultimate Editions)

Please Note:

IIS is not supported in Starter, Home Basic, Home Premium Editions
STEPS TO CHECK WHETHER IIS IS ALREADY INSTALLED IN YOUR COMPUTER

Please type **http://localhost** in the address bar of your Internet browser and press Enter key.

If IIS is already installed in your computer then this screen will show up. Otherwise follow the steps mentioned in following pages.
TO INSTALL IIS – STEP 1

Click Start and Select Control Panel
TO INSTALL IIS – STEP 2

Windows Vista

Click Classic View

Select Programs & Features

Windows 7

Select any Category: Large or Small Icons

Select Programs & Features
Click “Turn Windows Features ON or OFF”
This window (Windows Features) will be shown. You can see that the Internet Information Services (IIS) is not selected.

Select the check box next to Internet Information Services. You have to select all the components of IIS by expanding it by clicking the ‘+’ sign (shown in next page).
TO INSTALL IIS – STEP 5

You can see here that all the components of IIS are selected.

Click ‘OK’ after selecting all the IIS Components.
You can see here that IIS is being installed through the progress bar window.
TO INSTALL IIS – STEP 7

Close all the windows and check as mentioned to ensure that IIS is properly installed.

Please type http://localhost in the address bar of your Internet browser and press Enter key.

If IIS is properly installed in your computer as mentioned in Steps 1-6 then this screen will show up.
